HTML and CSS Basics

HTML

HTML provides the structure of a web page using elements such as headings, paragraphs, links, images, forms, and tables.

Basic Structure

A page normally contains html, head, and body elements. The body contains visible content.

CSS

CSS controls presentation such as colors, spacing, fonts, borders, and layout.

Selectors

Common selectors include element, class, and id selectors.

Flexbox

Flexbox is useful for arranging items in rows or columns and aligning them.

Responsive Design

Use flexible layouts and media queries so pages work on mobile, tablet, and desktop screens.

Conclusion

HTML creates structure while CSS creates presentation and layout.
