Node.js Basics

Introduction

Node.js lets JavaScript run outside the browser and is commonly used for servers and APIs.

npm

npm is the package manager commonly used with Node.js projects. package.json stores project metadata and dependencies.

Modules

Node.js applications can be split into reusable modules. Modern projects commonly use import and export.

HTTP Server

Node.js can create HTTP servers that receive requests and return responses.

APIs

Node.js is often used to build REST APIs that communicate with web and mobile applications.

Express

Express is a popular framework for building Node.js web servers and APIs.

Conclusion

Learn modules, npm, HTTP, APIs, and Express to build practical backend applications.
